Portfolio: ihouissa.github.io · Languages: English, Arabic (native)

SUMMARY

Forward Deployed Engineer at 3 Sixty One in Auckland, embedded with client teams from the first conversation to production. I turn real business problems in construction and retail into AI-native products people use every day. I own the parts that make software trustworthy: clean data, clear permissions, safe migrations and solid integrations. I work with AI agents daily inside a disciplined process of specs, isolated worktrees, tests and review. Looking for AI, software development and automation roles in the Gulf region.

EXPERIENCE

3 Sixty One — Forward Deployed Engineer (AI Native Developer) Feb 2026 – Present
Auckland, New Zealand

- **Membership booking and POS platform** for a multi-location NZ barbershop chain: main developer, live since the 27 Apr 2026 cutover with about 33,600 historical sales migrated and 506 duplicates resolved.
- Learned the client's business rules and designed their membership model. Built GoCardless billing, online booking, SmartPay EFTPOS and Xero sync. 255 automated test files.
- **Conflow**, a multi-tenant construction estimating SaaS (NestJS, Prisma, React, Azure): core developer on forecasting, variations, deployment and cost integration, plus AI access.
- **Tally**, an AI-assisted drawing takeoff tool: on a sample tender drawing, the unattended AI takeoff came within 5% of a manual reference measurement.
- **Anvil**, our internal Electron app that runs Claude and Codex agents in parallel in isolated git worktrees: main contributor. 30 tagged releases, used daily by the team. 457 automated test files.
- **Live Feedback Recorder**: desktop app that records screen and voice, transcribes locally with Whisper, and exports a bundle a coding agent can act on.
- Own client relationships: run discovery and demos, write requirements and acceptance criteria.

Orams Marine — Marine Coatings Technician Apr 2025 – Feb 2026

- Relocated from the US and joined the refit team. Built **Orams Flow** with Claude Code in one night, a role-based order and inventory app for the materials store. I showed it to 3 Sixty One, and they offered me a role.

YAZFIN Financial Services — Junior Software Developer / IT Systems Nov 2024 – Apr 2025

- Built internal tools and setup processes that cut workstation deployment time by approximately 40%. Maintained Microsoft 365 and access permissions.

Revature — Software Engineering Intern Jul 2024 – Oct 2024

- Built full-stack training apps across front end, backend, databases and APIs, delivered with Git in a team.

6/5 Renovation Solutions, LLC — Founder / Owner Jul 2022 – Dec 2023

- Founded and ran a client-facing renovation business. Built its project tracking system.

SKILLS

AI and automation: Claude Code, OpenAI Codex, MCP, multi-agent orchestration, context engineering, Whisper
Engineering: TypeScript, PHP, SQL, Python, React, Next.js, NestJS, Laravel, Electron, Prisma
Data and infrastructure: PostgreSQL, Azure, Docker, CI/CD
Integrations and delivery: Microsoft 365, Entra ID, Graph, OAuth, GoCardless, data migration, requirements and UAT

EDUCATION & CERTIFICATIONS

BS Computer Science, University of North Carolina at Charlotte (2022)
CompTIA Security+ (Feb 2023) · **Google Cybersecurity Certificate** (Feb 2023)
